

# Digital Vault

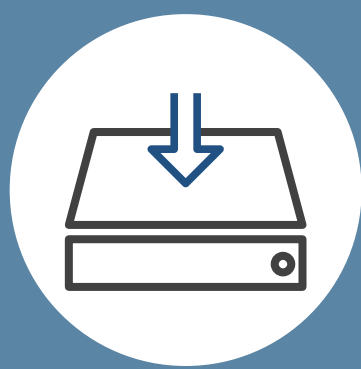

Protect software licensees without risking source code assets.

## What is Software Escrow?

Software escrow protects software developers and users by providing safe and secure storage of source code (or other digital assets) and release to licensees upon specific conditions.

## Who Uses Software Escrow?

Software development companies

Small and medium sized businesses (SMB)

Financial institutions (banks, credit unions, and title companies)

Legal representatives for c-suite business interactions

## Safe, Secure & Simple Cloud Storage:

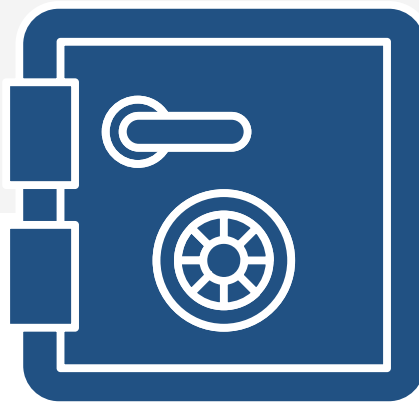

Software source code or other digital assets are uploaded to the Digital Vault application. Secure and separate access controls are provided to each licensor's digital vault and, after the licensor uploads their source code, licensee(s) are notified of the updated deposit and allowed access to Digital Vault to view the secure deposit. Assets are released to licensees under specific conditions defined in the escrow agreement.

Licensor

Licensee(s)
